

This correspondence is to urge the FCC to reject petition 04-160 by the NAB. Satellite radio services provided by Sirius and XM, especially traffic and weather services are important to those customers who PAY to receive these services in their vehicles, homes, and businesses. Living in a rural area, the ability to receive local content is difficult already. Satellite radio has enabled us to receive this content once unavailable to us. Though the NAB is attempting to protect the advertising revenue of its members, we must remember that our capitalist economy runs best without government intervention. This attempt by the NAB is not giving consumers the ability to pay for what they want and get what they pay for. Thank you.
